

## **ANNUAL MAINTENANCE**

Continuously operating Air pollution equipment & Material Handling systems needs annual shut down for thorough checking and replacement of worn out and weak components and spare parts. Downtime cost of continuously operating Air pollution equipment is quite high and hence annual shutdown maintenance time shall be bare minimum for any plant.

We provide excellent services in this area. We do the diagnostic study, prepare the shutdown maintenance plans with the help of latest planning and scheduling techniques, predict the requirement of spares in advance and arrange spares and fabricated items.

Having completed all the above essential pre-requirements, we commence the shutdown maintenance activities by providing people, tools and spares and components. Spares and components can be supplied by the client if they so desire.

Completion of the annual shutdown jobs within the minimum possible time with utmost reliability is ensured.
